

Uniden Introduces New Wireless Video Surveillance Products and the World's First Waterproof, Floating GMRS/FRS Two-Way Radios

FORT WORTH, Oct. 21, 2009 - [Uniden America Corporation](#), a leading manufacturer of wireless consumer electronics, today announced their new lines of wireless video surveillance products and two-way radios for the North American market. These introductions mark [Uniden](#)'s entrance into the wireless video surveillance category and the expansion of its already robust line of two-way radio solutions with the addition of two new floating, waterproof models.

"Making consumers' lives easier through the creation of innovative, wireless products has always been the focus at [Uniden](#)" said Rex Holloway, vice president of new product development at [Uniden America Corporation](#). "Our new wireless video surveillance products and first-ever waterproof, floating two-way radios are natural extensions of our World Without Wires brand philosophy and perfect examples of [Uniden](#)'s continued commitment to innovation."

Wireless Video Surveillance

Perfect for the home or small business, [Uniden](#)'s wireless video surveillance products use digital 2.4GHz wireless technology for a secure, interference-free experience. Simple installation and a choice of a variety of cameras and monitors offer a complete video surveillance solution.

The product line includes a 3.5-inch portable wireless video monitor, a 7-inch wireless video monitor, an indoor/outdoor wireless camera and a compact portable wireless camera. The system can support one monitor and up to four cameras, and both the indoor/outdoor and portable wireless cameras are equipped with infrared night vision. The included surveillance software allows users to monitor and control the system from a personal computer, and offers a variety of recording capabilities, including scheduling and motion detection. In addition, both the 3.5-inch and 7-inch monitors can be easily connected to a television via standard RCA cables for big screen viewing.

Waterproof Two-way Radios

In addition to its new wireless video surveillance offerings, [Uniden](#) is also introducing two new waterproof GMRS/FRS two-way radios. Built to the JIS-7 standard, these rugged radios can be submersed in three feet of water for up to 30 minutes. The radios are also designed to float, making them ideal for use in a variety of weather conditions, outdoor activities and environments.

With a maximum range of 28 miles, these models are packed with all the features consumers have come to expect from [Uniden](#)'s two-way radios. The radios allow for 6,270 channel combinations to ensure secure communications that are free from interference. Features such as Channel Scan, Channel Monitor, large buttons and an over-sized backlit display ensure ease of use in any situation. [Uniden](#)'s Direct Call feature allows users to call one person in a group without calling everyone, while the innovative Auto Channel Change feature funnels everyone in a user group to a new channel to avoid interference when radio traffic is heavy.

Product Pricing and Availability

[Uniden](#)'s new wireless video surveillance systems are currently available at major North American retailers and online at www.unidendirect.com. Product packages and pricing include:
